Information for Making Placement Decisions

Placement Group: ON-CAMPUS

Summary of Placement Variables

This table summarizes the placement variables used in requested analyses for each reference course. The table shows number of students, mean value, and standard deviation.

The descriptive statistics for course completers are based on students who receive A-F grades. However, if you chose to treat W grades as unsuccessful outcomes, the statistics will also include students with W grades.

		ON-CAMPUS			Students who completed course		
Reference course	Placement variable	N	Mean	SD	N	Mean	SD

Summary of Course Outcomes

This table summarizes the course outcomes used in requested analyses for each reference course.

The table shows number of students, mean course grade, standard deviation, percent B or higher, percent C or higher, total of just W and I grades, and W grades not treated as successful.

		Grades used in analysis						
Reference course	Placement variable	N	Mean	SD	Percent B or higher	Percent C or higher	Total of W and I grades	W grades treated as not successful

	ACT Reading Score and High School Social Studies Grade Average	116	2.7	1.3	60	82	5	Yes

This table and graph report students' chances of achieving a B / C or higher in PSYCH/SOC, given their ACT Reading Score. For example, the chance that a student with an ACT Reading Score of 22 would obtain a B or higher in PSYCH/SOC is 56%.

If present, the boldface scores labeled as Opt. B and Opt. C in the table show the cutoff scores that are associated with the maximum accuracy rate. The information in the table and graph can be used to advise students about their chances of success in PSYCH/SOC.

Placement Information for PSYCH/SOC Using ACT Reading Score

This table shows the effects of using different ACT Reading Score cutoffs in PSYCH/SOC. For example, if you were to require students to have an ACT Reading Score of at least 22 to be placed into PSYCH/SOC, then you would expect:

- about 54% of your students would be placed in a lower-level course
- about 61% of your placement decisions would be correct
- about 66% of those placed in PSYCH/SOC would obtain a B or higher

Chance of a B or Higher in PSYCH/SOC, Given ACT Reading Score and High School Social Studies Grade Average

The matrix reports students' chances of achieving a B or higher in PSYCH/SOC, given their ACT Reading Score and High School Social Studies Grade Average. For example, the chance that a student with an ACT Reading Score of 17 and a High School Social Studies Grade Average of 2.2 would obtain a B or higher in PSYCH/SOC is 13%.

If present, the dark gold area shows the combinations of ACT Reading Score and High School Social Studies Grade Average values that are at or near a 50% chance level. The combinations that maximize the percentage of correct placement decisions (accuracy rate) always correspond to a chance of 50%.

ACT Reading Score

Chance of a C or Higher in PSYCH/SOC, Given ACT Reading Score and High School Social Studies Grade Average

The matrix reports students' chances of achieving a C or higher in PSYCH/SOC, given their ACT Reading Score and High School Social Studies Grade Average. For example, the chance that a student with an ACT Reading Score of 17 and a High School Social Studies Grade Average of 2.2 would obtain a C or higher in PSYCH/SOC is 41%.

If present, the dark gold area shows the combinations of ACT Reading Score and High School Social Studies Grade Average values that are at or near a 50% chance level. The combinations that maximize the percentage of correct placement decisions (accuracy rate) always correspond to a chance of 50%.

ACT Reading Score

Placement Information for PSYCH/SOC Using ACT Reading Score and High School Social Studies Grade Average

This table shows the impact of using different combinations of ACT Reading Scores and High School Social Studies Grade Averages as cutoff scores in PSYCH/SOC. For example, if you were to require students to have at least a 50% chance of a B or higher based on their ACT Reading Scores and High School Social Studies Grade Averages to be placed into PSYCH/SOC (see page 9), then you would expect:

- about 42% of your students would be placed in a lower-level course
- about 67% of your placement decisions would be correct
- about 65% of those placed in PSYCH/SOC would obtain a B or higher

If present, the shaded rows highlight the optimal cutoff combinations (i.e., those that lead to the highest percentage of correct placement decisions).

Logistic Regression Weights and Correlations

This table contains the estimated logistic regression weights used to calculate the chances of success in each course. The weights associated with each set of placement variables are shown with the corresponding significance level (p-value). This information can be used to calculate the chances of success for a given student.

A p-value is an estimate of the probability that a regression weight of magnitude equal to that reported in the table would occur by chance if the true regression weight were 0; the smaller the p-value, the more highly "statistically significant" the regression weight is. The correlation between the placement variables and course grades also is listed.
